

**REVISED SYLLABUS OF M.A./M.SC. (PREVIOUS) AND
M.A./M.SC.(FINAL) MATHEMATICS EFFECTIVE FROM
SESSION 2005-2006**

Note:

1. Each paper will carry 100 marks
2. Five periods in a week shall be allotted to each paper.
3. Equal weightage shall be given to each section of a paper if the paper contains more than one section.
4. Five questions are to be attempted out of ten questions in each paper.
5. In paper II analysis (Real & Complex) of M.A./M.Sc. Previous five questions are to be attempted selecting, at least two questions from each section.

M.Sc.(Previous) (W.E.F. 2005-2006)

1. Advanced Algebra
2. Analysis (Real & Complex)
3. Differential Equations
4. Advanced Fluid Dynamics
5. Advanced Discrete Mathematics

M.Sc.(Final) (W.E.F. 2006-2007)

Compulsory

1. Partial Differential Equations and Their Numerical solutions.
2. Operations Research
3. Topology

Optional (Any two Papers) Fourth & fifth papers

1. Functional Analysis
2. Mathematical Statistics
3. Programming in C: Theory and Practical (only for regular students)
4. Difference Equations
5. Integral Equations and Boundary Value Problems.
6. Solar Magneto Hydrodynamics
7. Information Theory

2 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

- 8. Fuzzy Sets and Their Applications
- 9. Differential Geometry of Manifolds
- 10. Wavelets
- 11. Biomechanics
- 12. Plasma Dynamics
- 13. General Relativity & Cosmology
- 14. Dissertation may be opted as one of the optional paper only for regular students who have obtained at least 60% Marks in M.Sc. Previous.

DETAILS OF SYLLABI

M.A./M.SC. MATHEMATICS (PREVIOUS)

PAPER-I M.M. : 100

ADVANCED ALGEBRA

Groups- Normal and Subnormal Series, Composition Series, Jordan-Holder theorem, Solvable groups, Nilpotent groups.

Ring theory- Ring homomorphism. Ideals and Quotient Rings. Field of Quotients of an Integral Domain. Euclidean Rings. Polynomial Rings. Polynomials over the Rational Field. The Eisenstien Criterion. Polynomial Rings over Commutative Rings. Unique factorization domain. R unique factorisation domain implies so i & $R[x_1, x_2, \dots, x_n]$.

Definition and examples of vector spaces. Subspaces, Sum and direct sum of subspaces. Linear span. Linear dependence, independence and their basic properties. Basis, Finite dimensional vector spaces. Existence theorem for bases. Invariance of the number of elements of a basis set. Dimension, Existence of complementary subspace of a finite dimensional vector space. Dimension of sums of subspaces. Quotient space and its dimension. Linear transformations and their representation as matrices. The Algebra of linear transformations. The rank nullity theorem. Change of basis. Dual space. Bidual space and natural isomorphism. Adjoint of a linear transformation. Eigenvalues and eigenvectors of a linear transformation. Diagonalisation. Annihilator of a subspace. Bilinear, Quadratic and Hermitian forms.

3 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

Inner Product spaces-Cauchy- Schwarz inequality. Orthogonal vectors. Orthogonal Complements. Orthonormal sets and bases. Bessel's inequality for finite dimensional spaces. Gram-Schmidt Orthogonalization process.

Canonical Forms-Similarity of linear transformations. Invariant subspaces. Reduction to triangular forms. Nilpotent transformations. Index of nilpotency. Invariants of a nilpotent transformation. The primary decomposition theorem. Jordan blocks and Jordan forms.

Modules, Submodules, Quotient modules, Homomorphism and Isomorphisms theorem.

Cyclic modules, Simple modules. Semi-simple modules. Schuler's lemma. Free modules. Field theory-Extension fields, Algebraic and transcendental extensions. Separable and inseparable extensions. Normal extensions. Perfect fields. Finite fields. Primitive elements. Algebraically closed fields. Automorphisms of extensions. Galois extensions. Fundamental theorem of Galois theory. Solution of polynomial equations by radicals. Insolvability of the general equation of degree 5 by radicals.

M.A./M.SC. MATHEMATICS (PREVIOUS)

PAPER-II

M.M. : 100

ANALYSIS (REAL & COMPLEX)

Section A: Real Analysis

MM 50

Definition and existence of Riemann-Stielijes integral, Properties of the Integral, Integration and differentiation, the fundamental theorem of calculus.

Rearrangements of terms of a series, Riemann's theorem.

Sequences and series of functions, pointwise and uniform convergence, Cauchy criteria for uniform convergence, Weierstrass M-test, Abel's and Dirichlet's tests for uniform convergence, uniform convergence and continuity, uniform convergence and Riemann-Stielijes integration. Uniform convergence and differentiation, Weierstrass approximation theorem, Power series uniqueness theorem for power series. Abel's and Tauber's theorems.

Functions of several variables, linear transformations, Derivatives in an open subset of Chain rule, Partial derivatives, interchange of the order of differentiation, Derivatives of high orders, Taylor's theorem, Inverse function

5 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

theorem, Implicit function theorem, Jacobians, Lagrange's multiplier method.

Lebesgue outer measure. Measurable sets. Regularity. Measurable functions. Borel and Lebesgue measurability. Non-measurable sets, Riemann and Lebesgue Integrals.

Measures and outer measures, Extension of a measure. Uniqueness of extension completion of a measure. Measure spaces. Integration with respect to a measure.

Section B : Complex Analysis

MM 50

Complex integration, Cauchy-Goursat theorem. Cauchy's integral formula. Higher order derivatives. Morera's theorem. Cauchy's inequality and Liouville's theorem. The fundamental theorem of algebra. Taylor's theorem. Maximum modulus principle. Schwarz lemma. Laurent's series. Isolated singularities. Meromorphic functions. The argument principle. Rouché's theorem, Inverse function theorem.

Residues. Cauchy's residue theorem. Evaluation of integrals. Branches of many valued functions with special reference to $\arg z$, $\log z$ and z^a .

Bilinear transformations, their properties and classifications. Definitions and examples of Conformal mappings.

Weierstrass' factorization theorem. Gamma function and its properties. Riemann Zeta function. Riemann's functional equation. Runge's theorem. Mittag-Leffler's theorem. Analytic Continuation. Uniqueness of direct analytic continuation. Uniqueness of analytic continuation along a curve. Power series method of analytic continuation. Schwarz Reflection Principle.

Canonical products. Jensen's formula. Poisson-Jensen Formula. Hadamard's three circles theorem. Order of an entire function. Exponent of Convergence. Borel's theorem. Hadamard's factorization theorem.

M.A./M.SC. MATHEMATICS (PREVIOUS)

PAPER-III

M.M. : 100

DIFFERENTIAL EQUATIONS

Preliminaries-initial value problem and the equivalent integral equation, m th order equation in d -dimensions as a first order system, concepts of local existence, existence in the large and uniqueness of solutions with examples.

Basic Theorems-Ascoli- Arzela theorem. A theorem on Convergence of solutions of a family of initial value problems.

Picard-Lindelof theorem- Peano's existence theorem and corollary. Maximal intervals of existence. Extension theorem and corollaries. Kamke's convergence theorem. Kneser's theorem (statement only).

Differential Inequalities and Uniqueness- Gronwall's inequality. Maximal and Minimal solutions. Differential inequalities. A theorem of Winter. Uniqueness theorems. Nagumo's and Osgood's criteria.

8 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

Egres points and Lyapunov functions. Successive approximations.

Linear Differential Equations- Linear System, Variation of constants, reduction to smaller systems. Basic inequalities, constant coefficients. Floquet theory. Adjoint systems, Higher order equations.

Dependence on initial conditions and parameters; Preliminaries. Continuity. Differentiability. Higher Order Differentiability.

Poincare- Bendixson Theory-Autonomous systems. Umlanfsatz. Index of a stationary point.

Poincare- Bendixson theorem. Stability of periodic solutions, rotation points, foci, nodes and saddle points.

Linear second order equations-Preliminaries. Basic facts. Theorems of Sturm. Sturm-Liouville Boundary Value Problems. Number of zeros. Nonoscillatory equations and principal solutions. Nonoscillation theorems.

Use of Implicit function and fixed point theorems-Periodic solutions. Linear equations. Nonlinear problems.

Second order Boundry value problems- Linear problems. Nonlinear problems. Aprori bounds.

M.A./M.SC. MATHEMATICS (PREVIOUS)**PAPER-IV****M.M. : 100****ADVANCE FLUID DYNAMICS**

Kinematics of Fluids- Lagrange's and Euler's Methods, Stream Lines, Equation of Continuity, Boundary Surface Equation of Motions of Non-Viscous Fluids- Euler's Equation of Motion (Vector form), Bernoulli's Pressure equation, Equation for Impulsive Motion (Vector form). Motion in Two Dimensions: Stream Function, Complex Potential of the motion, Sources and Sinks in Two dimensions, Doublets, Images, Circle theorem, Blasius theorem and its application..

General Theory of Irrotational Motion- Flow and Circulation, Permanence of Irrotational Motion, Kelvin's Circulation Theorem, Minimum Energy Theorem, Kutta-Joukowski Theorem, Kinetic Energy of Infinite Liquid. Motion of Cylinders, Motion of a Circular Cylinder, Liquid Streaming past a fixed circular cylinder, Motion of two co-axial cylinders, Circulation about a Circular Cylinder. Motion of an Elliptic Cylinder, Liquid streaming past a fixed Elliptic Cylinder, Rotating Elliptic Cylinders.

Irrotational motion in three dimensions: Motion of a sphere. Sphere through a liquid at rest at infinity. Liquid streaming past a fixed sphere. Equation of motion of a sphere. Stokes stream function.

Vortex motion and its elementary properties. Kelvin's proof of permanence. Motions due to circular and rectilinear vortices. Wave motion in a gas. Speed of sound. Equation of motion of a gas. Subsonic, sonic and supersonic flows of a gas. Isentropic gas flows. Flow through a nozzle. Normal and oblique shocks.

Stress components in a real fluid. Relations between rectangular components of stress. Connection between stresses and gradients of velocity. Navier-stoke's equations of motion. Plane Poiseuille and Couette flows between two parallel plates. Theory of Lubrication. Flow through tubes of uniform cross section in form of circle, annulus, ellipse and equilateral triangle under constant pressure gradient. Unsteady flow over a flat plate.

Dynamical similarity, Buckingham p-theorem. Reynolds number. Prandtl's boundary layer. Boundary layer equations in two-dimensions. Blasius solution.

10 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

Boundary layer thickness. Displacement thickness. Karman integral conditions. Separation of boundary layer flow.

M.A./M.SC. MATHEMATICS (PREVIOUS)

PAPER-V

M.M. : 100

ADVANCED DISCRETE MATHEMATICS

Formal Logic-Statements. Symbolic Representation and Tautologies. Quantifiers, Predicates and Validity. Propositional Logic.

Semigroups & Monoids- Definitions and Examples of Semigroups and Monoids (including those pertaining to concatenation operation). Homomorphism

11 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

of semigroups and monoids. Congruence relation and quotient Semigroups. Subsemigroup and submonoids. Direct products. Basic Homomorphism Theorem.

Lattices- Lattices as partially ordered sets. Their properties. Lattices as Algebraic systems. sublattices, Direct products, and Homomorphisms. Some Special lattices e.g., Complete, Complemented and Distributive Lattices.

Boolean Algebras- Boolean Algebras as lattices. Various Boolean Identities. The Switching Algebra example. Sub algebras, Direct Products and Homomorphisms. joinirreducible elements, Atoms and Minterms. Boolean Forms and their Equivalence. Minterm Boolean Forms, Sum of Products. Canonical Forms. Minimization of Boolean Functions. Applications of Boolean Algebra to Switching Theory (using AND, OR & NOT gates). The Karnaugh Map method.

Graph Theory- Definition of (undirected) Graphs Paths, Circuits, Cycles, & Subgraphs. Induced Subgraphs. Degree of a vertex. Connectivity. Planar Graphs and their properties. Trees, Euler's Formula for connected Planar Graphs. Complete & Complete Bipartite Graphs. Kuratowski's Theorem (statement only) and its use. Spanning Trees, Cut-sets, Fundamental Cut-sets, and Cycles. Minimal Spanning Trees and Kruskal's Algorithm. Matrix Representations of Graphs.

Euler's Theorem on the Existence of Eulerian Paths and Circuits. Directed Graphs. In degree and Out degree of a vertex. Weighted undirected Graphs. Dijkstra's Algorithm. Strong Connectivity & Warshall's Algorithm. Directed Trees. Search Trees. Tree Traversals.

Introductory Computability Theory- Finite State Machines and their Transition Table Diagrams. Equivalence of Finite State Machines. Reduced Machines. Homomorphism. Finite Automata. Acceptors. Non-deterministic Finite Automata and equivalence of its power to that of Deterministic Finite Automata. Moore and Mealy Machines.

Turing Machine and Partial Recursive Functions.

Grammars and Languages- Phrase-Structure Grammars. Rewriting Rules. Derivations. Sentential Forms. Language generated by a Grammar. Regular, Context-Free, and Context Sensitive Grammars and Languages. Regular sets, Regular Expressions and the Pumping Lemma. Kleene's Theorem.

12 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

Notions of Syntax Analysis. Polish Notations. Conversion of Infix Expressions to Polish Notations. The Reverse Polish Notation.

M.A./M.SC. MATHEMATICS (FINAL)

PAPER-I

M.M. : 100

PARTIAL DIFFERENTIAL EQUATIONS AND THEIR NUMERICAL SOLUTIONS

Examples of PDE, Classification,

Transport Equation-Initial Value Problem, Non-homogeneous Equation.

Laplace's Equation-Fundamental Solution, Mean Value Formulas, Properties of Harmonic Functions, Green's Function, Energy Methods.

Heat Equation-Fundamental Solution, Mean Value Formula, Properties of Solutions, Energy Methods.

Wave Equation- Solution by Spherical Means. Non-homogeneous Equations, Energy Methods.

Nonlinear First Order PDE- Complete Integrals, Envelopes, Characteristics, Hamilton Jacobi Equations (Calculus of Variations, Hamilton's ODE, Legendre Transform, Hopf-Lax Formula, Weak Solutions, Uniqueness), Conservation Laws (Shocks, Entropy Conditions, Lax-Oleinik Formula, Weak Solutions, Uniqueness, Riemann's Problem, Long Time Behaviour)

Representation of Solutions-Separation of Variables, Similarity Solutions (Plane and Travelling Waves, Solutions, Similarity Under Scaling), Fourier and Laplace Transform, Hopf-Cole Transform, Hodograph and Legendre Transforms. Potential Functions, Asymptotics (Singular Perturbations, Laplace's Method, Geometric Optics, Stationary Phase, Homogenization), Power Series (Non Characteristic Surfaces, Real Analytic functions, Cauchy-Kovalevskaya Theorem).

Deriving Difference Equations, Elliptic equations : solution of Laplace's equation, Liebmann's iterative method, relaxation method, solution of Poisson's equations, Parabolic equations, Solution of heat equation, Bender-Schmidt method. The Crank-Nicholson method, Hyperbolic equations : solution of hyperbolic equations.

M.A./M.SC. MATHEMATICS (FINAL)

PAPER-II

M.M. : 100

OPERATIONS RESEARCH

Operations Research and its Scope. Necessity of Operations Research in Industry.

Linear Programming-Simplex and revised simplex Method. Theory of the Simplex Method. Duality and Sensitivity Analysis.

Other Algorithms for Linear Programming-Dual Simplex Method. Parametric Linear Programming. Upper Bound Technique. Interior Point Algorithm. Linear Goal Programming.

Transportation and Assignment Problems.

Network Analysis-Shortest Path Problem. Minimum Spanning Tree Problem. Maximum Flow Problem. Minimum Cost Flow Problem. Network Simplex Method. Project Planning and Control with PERT-CPM.

Dynamic Programming-Deterministic and Probabilistic Dynamic programming.

Game Theory-Two-Person, Zero-Sum Games. Games with Mixed Strategies. Graphical Solution. Solution by Linear Programming.

Integer Programming-Branch and Bound Technique.

Applications to industrial Problems-Optimal product mix and activity levels. Petroleumrefinery operations. Blending problems. Economic interpretation of dual linear programming problems. Input-output analysis. Leontief system. Indecomposable and Decomposable economies.

Nonlinear Programming-One and Multi-Variable Unconstrained Optimization. Kuhn-Tucker Conditions for Constrained Optimization. Quadratic Programming. Separable Programming. Convex Programming. Non-convex Programming.

PAPER-III

M.M. : 100

TOPOLOGY

Countable and uncountable sets. Infinite sets and the Axiom of Choice. Cardinal numbers and its arithmetic. Schroeder-Bernstein theorem. Cantor's theorem and the continuum hypothesis. Zorn's lemma. Well-ordering theorem.

Definition and examples of topological spaces. Closed sets. Closure. Dense subsets. Neighbourhoods. Interior, exterior and boundary. Accumulation points and derived sets. Bases and sub-bases. Subspaces and relative topology.

Alternate methods of defining a topology in terms of Kuratowski-Closure

Operator and Neighbourhood System.

Continuous functions and homeomorphism.

First and Second Countable spaces. Lindelof's theorems. Separable spaces. Second Countability and Separability.

Separation axioms T_0, T_1, T_2, T_3, T_4 ; their Characterizations and basic properties. Urysohn's lemma. Tietze extension theorem.

Compactness. Continuous functions and compact sets. Basic properties of compactness. Compactness and finite intersection property. Sequentially and countably compact sets. Local compactness and one point compactification. Stone-vech compactification. Compactness in metric spaces. Equivalence of compactness, countable compactness and sequential compactness in metric spaces.

Connected spaces. Connectedness on the real line. Components. Locally connected spaces.

Tychonoff product topology in terms of standard sub-base and its characterizations. Projection maps. Separation axioms and product spaces. Connectedness and product spaces. Compactness and product spaces (Tychonoff's theorem). Countability and product spaces.

Embedding and metrization. Embedding lemma and Tychonoff embedding. The Urysohn metrization theorem.

Nets and filters. Topology and convergence of nets. Hausdorffness and nets. Compactness and nets. Filters and their convergence. Canonical way of converting nets to filters and vice-versa. Ultra-filters and Compactness.

Metrization theorems and Paracompactness-Local finiteness. The Nagata-Smirnov metrization theorem. Paracompactness. The Smirnov metrization theorem.

The fundamental group and covering spaces-Homotopy of paths. The fundamental group. Covering spaces. The fundamental group of the circle and the fundamental theorem of algebra.

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

(Any two of followings)

1. FUNCTIONAL ANALYSIS

M.M. 100

Normed linear spaces. Banach spaces and examples. Quotient space of normed linear spaces and its completeness, equivalent norms. Riesz Lemma, basic properties of finite dimensional normed linear spaces and compactness. Weak convergence and bounded linear transformations, normed linear spaces of bounded linear transformations, dual spaces with examples. Uniform boundedness theorem and some of its consequences. Open mapping and closed graph theorems. Hahn-Banach theorem for real linear spaces, complex linear spaces and normed linear spaces. Reflexive spaces. Weak Sequential Compactness. Compact Operators. Solvability of linear equations in Banach spaces. The closed Range Theorem.

Inner product spaces. Hilbert spaces. Orthonormal Sets. Bessel's inequality. Complete orthonormal sets and Parseval's identity. Structure of Hilbert spaces. Projection theorem. Riesz representation theorem. Adjoint of an operator on a Hilbert space. Reflexivity of Hilbert spaces. Self-adjoint operators, Positive projection, normal and unitary operators. Abstract variational boundary-value problem. The generalized Lax-Milgram theorem.

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

2. MATHEMATICAL STATISTICS

M.M. 100

Probability- Set theoretic approach, Boole's inequality, Baye's theorem, Geometric probability, Random Variables- Distribution function, Joint probability distribution function, Conditional distribution function, Transformation of one and two dimensional Random variables Mathematical Expectation- Covariance, variance of n variates, Chebycheffs Inequality, Weak and Strong Laws of large numbers.

19 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

Moment Generating and Characteristic Functions and Cumulants- Study of the following distributions, their relationship with each other, distribution of their sum, difference, product, quotient etc.(a) Binomial, Poisson, Negative Binomial, Geometric, Pascal's, Polya's Hypergeometric distributions, Multinomial power series and discrete uniform, Compound binomial and poisson distributions. (b) Normal log-normal, log-normal, Gamma, Beta, Exponential, Bivariate Normal, Laplace, Weibul, Cauchy and Pearson's distributions.

Central Limit theorem, Underberg-Levy theorem., Derivation of Chi-square distributions, Non central chi-square distribution, Test of significance. Distribution Function-of t, F and z Test of significance. Theory of estimates- Principle of maximum likelihood, Properties of maximum likelihood estimators, Analysis of Variance- Analysis of variance in one way and two way classification.

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

3. Programming in C (with ANSI features)-Theory and Practical M.M.100

Note : The paper will have 70 marks for theory examination and 30 marks for practical examination.

An overview of programming. Programming language, Classification.

C Essentials-Program Development. Functions. Anatomy of a C Function. Variables and Constants. Expressions. Assignment Statements. Formatting Source Files. Continuation Character The Preprocessor.

Scalar Data Types-Declarations, Different Types of Integers. Different kinds of Integer Constants. Floating-Point Types. Initialization. Mixing Types. Explicit Conversions-Casts Enumeration Types. The Void Data Type. Typedefs. Finding the Address of an object. Pointers.

Control Flow-Conditional Branching, The Switch Statement. Looping

Nested Loops. The break and continue Statements. The goto statement. Infinite Loops.

Operators and Expressions-Precedence and Associativity. Unary Plus and Minus operators. Binary Arithmetic Operators. Arithmetic Assignment Operators. Increment and Decrement Operators. Comma Operator. Relational Operators. Logical Operators. Bit-Manipulation Operators. Bitwise Assignment Operators. Cast Operator. Size of Operators Conditional Operator. Memory Operators.

Arrays and Pointers-Declaring an Array. Arrays and memory. Initializing Arrays. Encryption and Decryption. Pointer Arithmetic. Passing Pointers as Function Arguments. Accessing Array Elements through Pointers. Passing Arrays as Function Arguments. Sorting Algorithms. Strings. Multidimensional Arrays. Arrays of Pointers. Pointers to Pointers.

Storage Classes-Fixed. vs. Automatic Duration. Scope. Global variables. The register Specifier. ANSI rules for the syntax and Semantics of the storage-class keywords. Dynamic Memory Allocation.

Structures and Unions-Structures. Linked Lists. Unions. enum Declarations.

Functions- Passing Arguments. Declarations and Calls. Pointers to Functions. Recursion. The main () Function. Complex Declarations.

The C Preprocessor-Macro Substitution. Conditional Compilation. Include Facility. Line Control.

Input and Output-Streams, Buffering. The <Stdio.h> Header File. Error Handling. Opening and Closing a File. Reading and Writing Data. Selecting an I/O Method. Unbuffered I/O Random Access. The standard library for Input/Output.

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

4. Difference Equations

M.M. 100

Introduction, Difference Calculus-The Difference Operator, Summation, Generating functions a approximate summation.

Linear Difference Equations-First order equations. General results for linear equation. Equations with constant coefficients. Applications. Equations with variable coefficients. Nonlinear equations that can be linearized. The z-transform.

Stability Theory-Initial value problems for linear systems. Stability of linear systems Stability of nonlinear systems, Chaotic. behaviour.

Asymptotic methods-Introduction. Asymptotic analysis of sums. Linear equations, Nonlinear equations.

The self-adjoint second order linear equation. Introduction. Sturmian Theory. Greens functions, Disconjugacy. The Riccati Equations. Oscillation.

The Sturm-Liouville problem-introduction, Finite Fourier Analysis, A non-homogeneous problem.

Discrete Calculus of variations-Introduction. Necessary conditions. Sufficient Conditions and Disconjugacy.

Boundary Value Problems for Nonlinear equations-Introduction. The Lipschitz case. Existence of solutions. Boundary Value Problems for Differential Equations.

Partial Differential Equations.

Discretization of Partial Differential Equations.

Solution of partial Differential Equations.

M.A./M.SC. MATHEMATICS (FINAL)**OPTIONAL PAPERS****5. Integral Equations and Boundary Value Problems M.M. 100**

Definitions of Integral Equations and their classification. Eigen values and Eigen functions. Fredholm integral equations of second kind with separable kernels. Reduction to a system of algebraic equations. An Approximate Method. Method of Successive Approximations. Iterative Scheme for Fredholm Integral equations of the second kind. Conditions of uniform convergence and uniqueness of series solution. Resolvent kernel and its results. Application of iterative Scheme to Volterra integral equations of the Second kind.

Classical Fredholm Theory. Fredholm Theorems.

Integral Transform Methods. Fourier Transform. Laplace Transform. Convolution integral. Application to Volterra integral equations with convolution type kernels, Abel's equations. Inversion formula for singular integral equations with kernel of the type $(h(s)-h(t)-a)$, $0 < a < 1$. Cauchy's Principal Value of singular integrals. Solution of Cauchy-type singular integral equation. The Hilbert Kernel. Solution of the Hilbert-Type singular integral equation.

Symmetric kernels. Complex Hilbert Space. Orthonormal system of functions. Fundamental properties of eigen values and eigen functions for symmetric kernels. Expansion in eigen function and bilinear form. Hilbert Schmidt Theorem and some immediate consequences. Solutions of integral equations with symmetric kernels.

Definition of a boundary value problem for an ordinary differential equation of the second order and its reduction to a Fredholm integral equation of the second kind. Dirac Delta Function. Green's function approach to reduce boundary value problems of a self-adjoint differential equation with homogeneous boundary conditions to integral equation forms. Auxiliary problem satisfied by Green's function. Integral equation formulations of boundary value problems with more general and inhomogeneous boundary conditions. Modified Green's function.

Integral representation formulas for the solution of the Laplace's and Poisson's equations. Newtonian single-layer and double layer potentials. Interior and exterior Dirichlet and Neumann boundary value problems for Laplace's equation.

23 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

Green's function for Laplace's equation in a free space as well as in a space bounded by a ground vessel. Integral equation formulation of boundary value problems for Laplace's equation.

Poisson's integral formula. Green's function for the space bounded by grounded two parallel plates or an infinite circular cylinder.

Perturbation techniques and its applications to mixed boundary value problems. Two-part and three-part boundary value problems.

Solutions of electrostatic problems involving a charged circular disk and annular circular disk, a spherical cap, an annular spherical cap in a free space or a bounded space.

OPTIONAL PAPERS

6.SOLAR MAGNETO HYDRODYNAMICS

M.M. 100

Description of the Sun : Brief history, Interior of the Sun, Outer atmosphere of the Sun, The quiet Sun, Transient features.

Basic Equations of MHD : Electromagnetic equations, Plasma equations, Energy equations, Induction equation, Lorentz force, Some theormes, Magnetic flux tube behaviour, Current sheet behaviour.

Magnetohydrostatic : Plasma structure in prescribed magnetic field, Structure of magnetic flux tubes, Current free fields, force free fields, Magnetohydrostatic fields.

Waves : Sound waves, Magnetic waves, Internal-Gravity waves, Inertial

24 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

waves, Magnetoacoustic waves, Acoustic-Gravity waves, Magnetoacoustic-Gravity waves, Five minute oscillations, Waves in strongly inhomogeneous medium, Surface waves on magnetic interface.

Shock waves : Hydrodynamic shocks, Perpendicular shocks, Oblique shocks.

Heating of the Upper Atmosphere : Models for atmospheric structure, Acoustic wave heating, Magnetic heating, Coronal loops.

Instability : Linearized equations, Normal mode method, Rayleigh-Taylor instability, Variational (Energy) method, Kink instability, Interchange instability, Kelvin-Helmholtz instability, Resistive Instability, Convective instability.

Sunspots : Magnetoconvection, Magnetic buoyancy, Cooling of sunspots, Equilibrium structure of Sun spots, penumbra, Evolution of a sunspot, Intense flux tubes.

Solar Flares: Magnetic reconnection, Simple-loop flare, Kink instability, Two-Ribbon flare, Eruptive instability, Post-flare loops.

Prominences : Formation, Magnetohydrostatics of support in a simple arcade, Kippenhahn-Schluter model, Support in configurations with helical fields, Coronal transients, Twisted & untwisted loop models.

Solar Wind : Parker's solution, Models for a spherical expansion, Streamers and coronal holes, Pneuman-Kopp model, Coronal hole models.

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

7. Information Theory

M.M. 100

Measure of Information- Axioms for a measure of uncertainty. The Shannon entropy and its properties. Joint and conditional entropies. Transformation and its properties.

Noiseless coding- Ingredients of noiseless coding problem. Uniquely decipherable codes. Necessary and sufficient condition for the existence of instantaneous codes. Construction of optimal codes.

Discrete Memoryless Channel- Classification of channels. Information processed by a channel. Calculation of channel capacity. Decoding schemes. The ideal observer. The fundamental theorem of information theory and its strong and weak converses.

Continuous Channels- The time-discrete Gaussian channel. Uncertainty of an absolutely continuous random variable. The converse to the coding theorem for time-discrete Gaussian channel. The time-continuous Gaussian channel. Band-limited channels.

Some intuitive properties of a measure of entropy Symmetry, normalization, expansibility, boundedness, recursivity maximality, stability, additivity, subadditivity, nonnegativity, continuity, branching etc, and interconnections among them. Axiomatic characterization of the Shannon entropy due to Shannon and Fadeev.

Information functions, the fundamental equation of information, information functions continuous at the origin, nonnegative bounded information functions, measurable Information functions and entropy. Axiomatic characterizations of the Shannon entropy due to Tverberg and Leo. The general solution of the fundamental equation of information. Derivations and their role in the study of information functions.

The branching property. Some characterizations of the Shannon entropy based upon the branching property. Entropies with the sum property. The Shannon inequality. Subadditive, additive entropies.

The Renji entropies. Entropies and mean values. Average entropies and their equality, optimal coding and the Renji entropies. Characterization of some

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

8. Fuzzy Sets and Their Applications

M.M. 100

Fuzzy Sets-Basic definitions. α -level sets. Convex fuzzy sets. Basic operations on fuzzy sets. Types of fuzzy sets. Cartesian products. Algebraic products. Bounded sum and difference. t-norms and t-conorms.

The Extension Principle-The Zadeh's extension principle. Image and inverse image of fuzzy sets. Fuzzy numbers. Elements of fuzzy arithmetic.

Fuzzy Relations and fuzzy Graphs-Fuzzy relations on fuzzy sets. Composition of fuzzy relations. Min-Max composition and its properties. Fuzzy equivalence relations. Fuzzy compatibility relations. Fuzzy relation equations. Fuzzy graphs. Similarity relation.

Possibility Theory-Fuzzy measures. Evidence theory. Necessity measure. Possibility measure. Possibility distribution. Possibility theory and fuzzy sets. Possibility theory versus probability theory.

Fuzzy Logic-An overview of classical logic, Multivalued logics. Fuzzy propositions. Fuzzy quantifiers. Linguistic variables and hedges. Inference from conditional fuzzy propositions, the compositional rule of inference.

Approximate Reasoning-An overview of fuzzy expert system. Fuzzy implications and their selection. multiconditional approximate reasoning. The role of fuzzy relation equation.

An Introduction to Fuzzy Control-Fuzzy controllers. Fuzzy rule base. fuzzy inference engine. Fuzzification. Defuzzification and the various defuzzification

27 M.A./M.Sc. Previous & Final New Syllabus of Mathematics

methods (the centre of area, the centre of maxima, and the mean of maxima methods).

Decision Making in Fuzzy Environment-Individual decision making. Multiperson decision making. Multicriteria decision making. Multistage decision making. Fuzzy ranking methods. Fuzzy linear programming.

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

9. Differential Geometry of Manifolds... M.M. 100

Definition and examples of differentiable manifolds. Tangent spaces. Jacobian map. One parameter group of transformations. Lie derivatives. Immersions and imbeddings. Distributions. Exterior algebra. Exterior derivative.

Topological groups. Lie groups and lie algebras. Product of two Liegroups. One Parameter subgroups and exponential maps. Examples of Liegroups. Homomorphism and Isomorphism. Lie transformation groups. General linear groups. Principal fibre bundle. Linear frame bundle. Associated fibre bundle. Vector bundle. Tangent bundle. Induced bundle. Bundle homomorphisms.

Riemannian manifolds. Riemannian connection. Curvature tensors. Sectional Curvature. Schur's theorem. Geodesics in a Riemanninan manifold. Projective curvature tensor. Conformal curvature tensor.

Submanifolds & Hypersurfaces. Normals. Gauss formulae. Weingarten equations. Lines of curvature. Generalized Gauss and Mainardi-Codazzi equations.

Almost Complex manifolds. Nijenhuis tensor. Contravariant and covariant almost analytic. vector fields. F-connection.

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

10. Wavelets Preliminaries.

M.M. 100

Different ways of constructing wavelets-Orthonormal bases generated by a single function: the Balian-Low theorem. Smooth projections on $L^2(\mathbb{R})$. Local sine and cosine bases and the construction of some wavelets. The unitary folding operators and the smooth projections. Multiresolution analysis and construction of wavelets. Construction of compactly supported wavelets and estimates for its smoothness. Band limited wavelets. Orthonormality. Completeness. Characterization of Lemarie-Meyer wavelets and some other characterizations. Franklin wavelets and Spline wavelets on the real line. Orthonormal bases of piecewise linear continuous functions for $L^2(\mathbb{T})$. Orthonormal bases of periodic splines, Periodization of wavelets defined on the real line.

Characterizations in the theory of wavelets-The basic equations and some of its applications. Characterizations of MRA wavelets, low-pass filters and scaling functions. Non-existence of smooth wavelets in $H^2(\mathbb{R})$.

Frames- The reconstruction formula and the Balian-Low theorem for frames. Frames from translations and dilations. Smooth frames for $H^2(\mathbb{R})$.

Discrete transforms and algorithms-The discrete and the fast Fourier transforms. The discrete and the fast cosine transforms. The discrete version of the local sine and cosine bases. Decomposition and reconstruction algorithms for wavelets.

OPTIONAL PAPERS

11. BIOMECHANICS

M.M. 100

Prerequisite : Fluid Mechanics

Newton's equations of motion. Mathematical modeling. Continuum approach.

Segmental Movement and Vibratons.

External Flow: Fluid Dynamic Forces Acting on Moving Bodies.

Flying and Swimming.

Blood Flow in Heart, Lung, Arteries, and Veins.

Micro-and macrocirculation.

Respiratory Gas Flow.

The Laws fo Thermodynamics. Molecular Diffusion, Mechanisms in Membrances and Multiphasic Structure.

Mass Trasport in Capillaries, Tissues, Interstitial Space, Lymphatics, Indicator Dilution Method and Peristalsis.

Description of Internal Deformation and Forces.

Stress, Strain and Stability of Organs.

Strength, Trauma and Tolerance.

Biomechanical Aspects of Growth. Engineering of Blood Vessels. Tissue Engineering of Skin.

Recommended Text

Y.C Fung, Biomechanics, Springer-Verlag, New York Inc., 1990.

M.A./M.SC. MATHEMATICS (FINAL)

OPTIONAL PAPERS

12. PLASMA DYNAMICS

M.M. 100

Introduction

Particle orbit theory

Macroscopic Equations: Fluid model of a plasma, Moment equations, Hydromagnetic equations, Criteria for applicability of a fluid description.

Hydromagnetic : Kinematics, Static problems, Hydromagnetic stability, interchange, Instabilities, Alfven waves.

Hydromagnetic Flows: Hydromagnetic Navier-Stokes equation, Hartmann flow, Couette flow, Flow stability, Parallel flows, Transverse flows, Plasma propulsion, MHD generators.

Shock Waves in Plasma: Hydromagnetic shock equations, Shock propagation parallel to magnetic field, Shock propagation perpendicular to magnetic field, Shock thickness, Collisionless shocks.

Waves in Cold Plasma: Some general wave concepts, Waves in cold plasmas: Alfven waves, Ion-cyclotron waves, Experimental results for low frequency waves, General theory of waves in cold plasmas, CMA diagram.

Waves in Warm Plasmas: MHD waves, Longitudinal waves in warm plasmas, Ion acoustic waves, Landau damping of longitudinal plasma waves, Experimental results for waves in warm plasmas, General dispersion relation.

Kinetic Theory: Equation for distribution function, Near-equilibrium plasma, Vlasov equation, Landau damping, Boltzmann equation, Properties of Boltzmann equation, Fokker-Planck equation, Transport coefficients, Derivation of Landau equation.

Plasma Radiation: Angular distribution from an accelerated charge, Frequency spectrum of radiation from an accelerated charge, Cyclotron radiation by an electron, Bremsstrahlung from a plasma, Radiation from plasma oscillations, Scattering of radiation in plasma, Transport of radiation in a plasma, Black body radiation from a plasma.
